

FILTER TECHNOLOGY

A test rig for testing coarse and fine dust filters according to EN779 is the fundamental component of our filter laboratory.

For the testing of coarse and fine dust filters, European standard EN 779, 'Particulate air filters for general ventilation', describes a uniform, reproducible test method, the requirements for particulate filters, and the test rig for measurement.

The modular design of the test rig makes it possible to test a wide variety of filters

This new, state-of-the-art EN 779 test rig meets the highest standards of filter testing and has been verified in a round robin test with the accredited testing institutes SP in Sweden and VTT in Finland.
